

# InsureTech

## Website Chatbot Knowledge Base — Frequently Asked Questions

---

This document is intended as a reference / knowledge source for the website's home-page chatbot. It explains, in plain customer-facing language, what InsureTech does, what is available to use today, and what is planned for future releases. Items marked **(Coming Soon)** should be answered by the bot as upcoming features — not as things a visitor can use right now.

Generated from PROJECT\_OVERVIEW.md. Internal/technical details (database schema, code paths, API routes) have intentionally been left out — this is a customer-facing FAQ, not engineering documentation.

## 1. About InsureTech

### What is InsureTech?

InsureTech is a digital insurance advisory platform that helps businesses understand their risk profile and find insurance coverage that fits their needs. Instead of relying on manual, one-off advice, InsureTech aims to guide you through a structured process and surface relevant policy recommendations.

### Who is InsureTech for?

InsureTech is built primarily for small and medium businesses (SMBs) that want a more structured, data-driven way to assess risk and explore insurance options, instead of an informal, manual advisory process.

### What problem does InsureTech solve?

Many small and medium businesses don't have an easy way to evaluate their risk exposure or know which insurance products actually fit their situation. InsureTech is designed to make that process self-service, consistent, and data-driven rather than ad-hoc.

### How does InsureTech work, at a high level?

The intended flow is: you create an account, complete a guided business risk-profiling questionnaire, the platform calculates a risk score across relevant categories, and then suggests insurance policies that match your profile. You can also get help from our support team via the contact form.

**Bot guidance:** The profiling questionnaire, scoring, and recommendations are part of the upcoming release — see Section 3. Today, the bot should describe this as the platform's direction, not as something already live.

## 2. Account, Login & Access

### How do I create an account?

You can register on the website using your email address and a password. Once registered, you can log in and access your account.

### How do I log in?

Use the login page with the email and password you registered with. Your session is kept secure using an authentication token stored in a protected browser cookie.

### I forgot my password — what do I do?

Use the 'Forgot Password' option on the login page. You'll receive an email with instructions to reset your password securely.

### Is my account information secure?

Yes. Passwords are never stored in plain text — they are securely hashed. Login sessions use industry-standard token-based authentication stored in a protected (httpOnly) cookie, which helps prevent common web attacks from accessing your session.

### What's the difference between a regular user and an admin?

Regular users can manage their own account, complete risk-profiling questionnaires (once available), and view their own results and recommendations. Administrators have additional access to manage the platform itself — such as viewing user statistics and managing user accounts — and do not get special insurance features beyond what a regular user has.

### Can I sign up with Google or another social account?

Not currently. At the moment, InsureTech only supports registering with an email address and password. Social login (Google, etc.) is not available.

## 3. Business Risk Profiling & Risk Scoring

### What is the business risk-profiling questionnaire?

It's a guided set of questions about your business designed to capture the information needed to assess your risk exposure across different categories (for example, operational, financial, or compliance-related risk, depending on how the questionnaire is configured). Some questions may branch depending on earlier answers.

**Bot guidance:** (Coming Soon) This feature is on the roadmap and is not yet available to use. If asked 'can I take the questionnaire now', the bot should say it isn't available yet rather than walking the user through steps.

### How is my risk score calculated?

The risk score is intended to be generated using a structured scoring engine that maps your questionnaire answers to weighted risk factors, then combines them into category scores. The underlying method planned for this is an AHP-based approach (Analytic Hierarchy Process), a recognized technique for combining multiple weighted factors into a single comparable score.

**Bot guidance:** (Coming Soon) The scoring engine is not yet implemented. Do not state specific weights, formulas, exact categories, or a numeric scoring scale — none of that has been built or finalized yet. Keep the answer at this conceptual level only, and tell the user this feature is in development.

### What risk categories does InsureTech assess?

The exact categories will be defined as part of the risk-profiling feature and may be adjusted over time without requiring code changes, since the questionnaire and scoring logic are designed to be configurable.

**Bot guidance:** (Coming Soon) Specific category names are not finalized — avoid listing concrete categories as if they already exist.

### Can I update or redo my risk profile later?

Business profile management (creating, viewing, and updating your business profile) is planned functionality.

**Bot guidance:** (Coming Soon) Not available yet — say so plainly if asked.

## 4. Insurance Recommendations & Policy Catalog

### Will InsureTech tell me which insurance to buy?

Yes — that's the goal. Once your risk profile and score are calculated, InsureTech is designed to recommend relevant insurance policies from a policy catalog based on your specific risk profile.

**Bot guidance:** (Coming Soon) The policy catalog and recommendation engine are not yet live. Do not name specific insurers, policies, premiums, or coverage terms — none currently exist in the system.

### Can I buy insurance directly through InsureTech?

No. InsureTech does not currently process payments or sell policies directly. There is no billing, subscription, or payment functionality on the platform. InsureTech is focused on advisory and recommendations, not transactions.

### Can I compare different insurance policies on the site?

Policy browsing and comparison will depend on the policy catalog, which is planned but not yet available.

**Bot guidance:** (Coming Soon)

## 5. Reports

### Can I download a report of my risk assessment?

Generating a downloadable PDF report summarizing your risk assessment and recommendations is planned functionality.

**Bot guidance:** (Coming Soon) Not available yet.

## 6. AI Assistant & Support

### Is this chat assistant powered by AI?

This chat assistant is here to answer common questions about InsureTech — what it does, how accounts work, and what's available today. A more advanced AI assistant capable of answering detailed questions by searching our policy documents directly is planned for a future release.

### I have a question this assistant can't answer — what should I do?

Please use the Contact form on the website to send your question to our team directly, and we'll get back to you by email.

### How does the Contact form work?

You can submit your name, email, and message through the Contact form on the site. Your message is sent to our support team via email so we can follow up with you.

## 7. General Platform Questions

### Is InsureTech available outside [your country/region]?

InsureTech currently operates as a single platform without region-specific configuration or multi-tenant separation. If you have questions about availability in your specific region, please reach out via the Contact form.

**Bot guidance:** The platform has no built-in regional/IRDAI-style compliance features documented yet — avoid making compliance or regulatory claims (e.g. 'we are IRDAI compliant'). Defer specific regulatory questions to the support team.

### Is there a mobile app?

Not at the moment. InsureTech is currently a responsive website that works in your mobile or desktop browser — there is no separate native mobile app.

### Is my data shared with third parties?

For specific questions about data handling and privacy, please contact our support team directly via the Contact form so they can give you accurate, up-to-date information.

**Bot guidance:** Do not improvise a privacy policy. No privacy-policy document was provided in the source material — always defer this question to human support.

## What languages is the website available in?

The website is currently available in English only.

---

**Note for whoever configures the chatbot:** Sections 3, 4, 5, and parts of Section 6 cover features that are not yet implemented in the product (per PROJECT\_OVERVIEW.md). They are included here so the bot can answer 'is this available / how will this work' questions honestly, without overpromising specifics that haven't been built. Update this document as each feature actually ships.
